

Integrated Lean Assessment

This on-site assessment will help you determine the current reality of your plant or organization for comparison against your desired state. In the process, you will uncover specific gaps that must be closed in order to achieve your objective and vision with recommendations on closing that gap.

This process can be used as a getting-started tool, an input to the annual planning process or a check-up along your lean journey. Both qualitative and quantitative, the assessment covers 13 wide-ranging categories – from material and information flow to problem-solving and

employee engagement. A quantitative score helps you measure progress year-over-year, while qualitative feedback includes specific details, information on broad trends and issues as well as suggestions on how you can close the gap to your desired state.

If your organization has articulated its own operating system and principles, the Center can also custom design an assessment tool that provides you feedback incorporating your own language and criteria.
