

Lean Six Sigma

While some companies use Lean and Six Sigma separately, many have found greater success by integrating them into one comprehensive continuous improvement process. Integration entails working through many issues ranging from language to infrastructure. To ensure success, it must be done seamlessly with the ongoing running of your business.

The coaches of the Lean Learning Center have been through this integration many times and can help assess, plan and execute your Lean Six Sigma process. We can help you leverage many different activities toward this objective.

Our Lean Six Sigma Leadership course provides critical lessons and ideas to aid in your efforts. Assessment of your programs will help uncover crucial gaps before you begin your journey or once you are on your way. On-site training can be provided by lean-thinking Master Black Belts. And, mentoring of champions, Black Belts and Project Leaders through their projects helps bring everything together.
